Project Name	Auto Ticket Classification using Flow Designer
Team Leader	AATHITHYA K V
Team Member	AATHITHYA K V
Team Size	1

User Persona

Students and teachers who submit IT helpdesk incident requests, and IT support staff who need to classify and process those tickets.

SAYS

- I need my IT issue to be classified quickly.
- The ticket submission process should be simple.
- I want my issue to reach the correct support team.

THINKS

- Manual ticket classification may take too much time.
- Similar incidents should not require repeated manual classification.
- Automation can make ticket handling faster and more reliable.

DOES

- Submits an incident request with a short description and description.
- Waits for the IT helpdesk to review and classify the ticket.
- Follows up with IT when the issue is not handled quickly.

FEELS

- Frustrated by delays in manual ticket classification.
- Concerned when the ticket is not assigned to the right category or team.
- Satisfied when the ticket is classified and routed quickly.

PAINS

- Manual ticket review and classification.
- Delays in assigning incidents to the correct team.
- Repetitive work for IT helpdesk staff.
- Possibility of incorrect or inconsistent categorization.

GAINS

- Faster ticket classification.
- Reduced manual effort for IT staff.
- Consistent and accurate categorization.
- Better routing of incidents to the appropriate team.
- Improved IT helpdesk efficiency.

Goal

Understand the needs, frustrations, and expectations of students, teachers, and IT support staff so the IT helpdesk process can be streamlined by automatically classifying incident tickets using keywords in the short description and description fields through Flow Designer.
