User Persona: Students / Teachers / School IT Support Staff

Students and teachers who face technical issues (Wi-Fi, projector failures, password resets, slow computers) and need quick IT support, alongside IT support staff who manually review and classify incident requests daily.

1. SAYS

- "I need my technical issue resolved quickly so I can continue my class/work."
- "The ticket submission process should be simple and straightforward."
- "I want to know which category my ticket is in and who is fixing it."
- "Manually categorizing every ticket takes up too much IT support time."

2. THINKS

- Manual review of every ticket is slow and inefficient.
- Common issues like password resets or Wi-Fi bugs should not require manual routing.
- Keyword-based automation can instantly route tickets to the right team.
- Automating categorization will reduce response time and workload.

3. DOES

- Submits an incident ticket with a short description and details.
- Waits for IT support to review, assign, and resolve the issue.
- Repeatedly follows up with the IT helpdesk for updates on ticket status.
- Manually sorts and reassigns misclassified tickets (IT Staff).

4. FEELS

- Frustrated by long wait times caused by manual ticket sorting.
- Anxious when class/study is interrupted by unresolved tech issues.
- Relieved when tickets are categorized and assigned immediately.
- Satisfied when the IT helpdesk resolves issues without delay.

5. PAINS

- Time-consuming manual review and categorization of daily tickets.
- Delays in assigning tickets to the correct IT support group.
- Lack of real-time visibility into ticket classification and status.
- Risk of human error in assigning wrong categories or groups.

6. GAINS

- Instant, automated keyword analysis and classification via Flow Designer.
- Faster ticket routing and reduced resolution time.
- Significant reduction in manual effort for IT support staff.
- Transparent tracking and automated status updates for students and teachers.
- Improved overall efficiency of the school IT helpdesk.

Goal

Understand the needs, frustrations, and expectations of students, teachers, and IT helpdesk staff so that incident reporting can be streamlined by automating ticket classification using ServiceNow Flow Designer.
