

# Solution Requirements (Functional & Non-functional)

|               |                                                |
|---------------|------------------------------------------------|
| Date          | 30 September 2026                              |
| Team ID       |                                                |
| Project Name  | Auto Ticket Classification using Flow Designer |
| Team Leader   | AATHITHYA K V                                  |
| Team Member   | AATHITHYA K V                                  |
| Team Size     | 1                                              |
| Maximum Marks | 4 Marks                                        |

## 1. Functional Requirements

| FR No. | Functional Requirement (Epic)                 | Sub Requirement (Story / Sub-Task)                                                                                                                                                                                                                           |
|--------|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Incident Ticket Submission                    | <ul style="list-style-type: none"><li>• Submit incident request by student/teacher</li><li>• Enter user details and contact info</li><li>• Enter Short Description and Description of the issue</li></ul>                                                    |
| FR-2   | Automated Keyword Analysis and Categorization | <ul style="list-style-type: none"><li>• Trigger Flow Designer upon ticket creation</li><li>• Analyze keywords in Short Description and Description</li><li>• Automatically assign correct Category (e.g., Wi-Fi, Projector, Password, Performance)</li></ul> |
| FR-3   | Automated Assignment and Routing              | <ul style="list-style-type: none"><li>• Route ticket to the appropriate IT Support assignment group</li><li>• Assign priority based on category/severity</li><li>• Record automated routing details in the incident log</li></ul>                            |
| FR-4   | Ticket Status Tracking and Management         | <ul style="list-style-type: none"><li>• View real-time ticket status</li><li>• Update ticket status as IT staff works on the issue</li><li>• Provide visibility to students/teachers on ticket progress</li></ul>                                            |
| FR-5   | Notifications and Resolution Updates          | <ul style="list-style-type: none"><li>• Send automated notification on ticket creation and classification</li><li>• Notify user upon status change or resolution</li><li>• Reduce repeated manual follow-ups by users</li></ul>                              |

## 2. Non-Functional Requirements

| NFR No. | Non-Functional Requirement | Description                                                                                                                                                        |
|---------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1   | Usability                  | The submission interface and ticket classification feedback should be simple, clear, and intuitive for students, teachers, and IT support staff.                   |
| NFR-2   | Security                   | Student/teacher personal data and internal IT ticket details should be protected with appropriate ServiceNow access controls (ACLs) and secure workflow execution. |
| NFR-3   | Reliability                | The keyword classification workflow should process every incident ticket consistently and maintain accurate records without dropping triggers.                     |
| NFR-4   | Performance                | Keyword analysis and category assignment via Flow Designer should occur in real time (within seconds of submission) without performance delays.                    |
| NFR-5   | Availability               | The automatic classification workflow must be continuously available whenever the ServiceNow platform is active.                                                   |
| NFR-6   | Scalability                | The solution should easily handle a high volume of daily incident submissions and allow seamless addition of new keywords or categories as IT needs grow.          |
